

uSMS CSM

Role Access, Authority, Powers and Permissions Master

Ultra-detailed, source-of-truth-grounded specification

Binding scope

This document covers the uSMS Customer Service Management governance chain and the four roles explicitly represented by the supplied source set: Service Customer, SCM Worker, CM Leader, and Service Owner. It does not invent permissions for roles or modules not established in the supplied sources.

Source baseline: DAL-24 uSMS Experience Specification v1.2 and role guides v1.0
Prepared July 2026

Document Control

Field	Value
Document purpose	Define exactly what each uSMS CSM role can see, access, initiate, approve, reject, monitor, communicate, escalate, and never perform.
Authoritative source set	DAL-24 uSMS Experience Specification v1.2; Role Guide: Service Customer v1.0; Role Guide: SCM Worker v1.0; Role Guide: CM Leader v1.0; Role Guide: Service Owner v1.0.
Roles covered	SERVICE_CUSTOMER, SCM_WORKER, CM_LEADER, SERVICE_OWNER.
Primary workspaces	WS-01 CSM Portal and WS-02 CSM Workspace. Service Owner access is described as an ownership-scoped accountability portal because no dedicated Service Owner workspace ID is defined in DAL-24.
Interpretation rule	Where a source gives business authority but no endpoint or screen, this document labels it as governance authority rather than inventing UI or API access.
Security rule	UI visibility never creates authority. Every action remains entitlement-, scope-, status-, and API-governed.
Out of scope	Service Desk operational roles, Problem Management workers/leaders, Change Enablement workers/leaders, Technical Owner implementation permissions, and platform administration.

How to Read This Document

- Access means the role may enter or view a workspace, screen, panel, data set, or record within its resolved scope.
- Power means a governed ability to make or authorize a business decision.
- Action means a user-triggered operation that calls a domain API or initiates a governed workflow.
- Approval means a required gate. Approval authority does not automatically include execution authority.
- Data scope is always narrower than the role name: own record, assigned customer, service ownership, organizational node, or tenant.
- Not authorized means the function is structurally prohibited, not merely hidden by UI configuration.

Source-of-Truth Principles Applied

Principle	Implementation consequence
Consume Never Own	CSM experiences consume uSMS/uSeC data; the Experience Layer does not own domain records.
Assist or Redirect	The workspace surfaces an action, but domain services enforce all state transitions, approvals, and closures.
Real-Time by Default	Lists, counters, status indicators, and alerts update through event subscriptions rather than polling.
Entitlement-Governed Rendering	A screen, panel, field, or action appears only when the caller is entitled and the API would allow it.
Separation Principle	CSM may trigger and govern catalog change, but Change Enablement executes the catalog write.
Reduced to the Max	Every UI element must support a decision, status understanding, or legitimate action.

1. CSM Governance Model

1.1 Governance chain and role layers

SeOS chain

CUSTOMER -> DEMAND -> QUOTE -> SERVICE -> EXECUTION -> OUTCOME -> EXPERIENCE

Layer	Role	Primary accountability	Execution posture
External governance actor	Service Customer	Business need, service consumption, budget implications, quote decision, organizational service authorization, SLA accountability.	Requests, accepts/declines commitments, monitors; does not execute IT operations.
Worker layer	SCM Worker	End-to-end demand lifecycle execution, customer communication, catalog governance triggers, SLM monitoring and reporting.	Primary CSM operator.
Leader layer	CM Leader	CSM throughput, quality, workload, quote/rejection/report gates, escalation discipline, separation of duties.	Operational governance and oversight; does not replace worker execution.
Owner layer	Service Owner	Service value, SLA commitment quality, lifecycle governance, breach response, commitment approval.	Structural governance and escalation; not queue execution.

1.2 Authority hierarchy

1. The Service Customer originates organizational demand and decides whether to accept the governed quote.
2. The SCM Worker assesses, prepares, records, coordinates, communicates, and executes the CSM lifecycle.
3. The CM Leader validates commitments and operational quality through mandatory gates.
4. The Service Owner approves or decides matters that affect service-level commitments, lifecycle, and structural accountability.
5. Change Enablement remains the execution authority for technical changes and catalog updates; CSM roles do not inherit that authority.

1.3 Core segregation-of-duties controls

Control	Required separation	Reason
Quote preparation vs approval	SCM Worker prepares; CM Leader approves before customer issuance.	Prevents unilateral organizational commitments.
Demand request vs change approval	Service Customer requests/accepts quote; CE Leader approves technical change.	Requester cannot approve execution.
CSM vs catalog write	SCM Worker/CM Leader trigger and govern; Change Enablement writes.	Preserves catalog integrity and auditability.
CSM leadership vs CE leadership	CM Leader cannot also serve as CE Leader for the same service scope.	Prevents assessment and execution approval concentration.
Service accountability vs technical ownership	Service Owner owns customer-facing service commitments; Technical Owner owns technical elements.	Separates value/SLA accountability from CI accountability.

2. Enterprise Permission Summary

Capability	Service Customer	SCM Worker	CM Leader	Service Owner
Submit/create demand	Submit own demand; cannot act for another OrgNode.	Create on behalf of legitimate Service Customer; create/maintain Demand Record.	Oversee and assign; not primary creator.	No routine demand creation.
Assess demand	No.	Yes: catalog check, feasibility, portfolio context.	Review quality and throughput; not substitute operator.	Consulted only where commitment/service implications require.
Redirect demand	No direct operational redirect; receives outcome.	Determine redirect and communicate.	Oversight; authorization where governance requires.	No routine redirect.
Reject demand	May decline a quote; cannot operationally reject intake.	Recommend/document rejection.	Authorize rejection; resolve contested rejection or escalate.	Decides only escalated commitment disputes.
Prepare quote	No.	Yes.	Review and approve; cannot issue directly.	Approves service commitment when significant/new commitment affects owned service.
Accept/decline quote	Yes, for own demand.	Record acceptance; communicate decision.	Ensures approved quote reached customer.	Not customer acceptance actor.
Create change request	No.	Yes after accepted demand / approved catalog need.	Oversee handover and boundaries.	May authorize commitment/lifecycle direction, not execute CR.
Approve technical change	No.	No.	No.	No; CE Leader authority.
Modify service catalog	No.	No direct write.	No direct write.	Authorize service direction/accuracy; CE executes change.
Monitor SLA	Own entitled services.	Assigned customers.	All CSM scope/tenant aggregation.	Owned services across customers.
Issue SLA communication	Receives and may escalate.	Yes, governed and contextual.	Reviews reports and critical communications.	Responds at structural breach/escalation level.
Assign work	No.	Assign to self where permitted.	Assign/reassign demands to SCM Workers.	No CSM workload assignment.
Cross-customer visibility	No.	Within assigned/tenant operational scope as entitled.	Tenant/function oversight scope.	Only services in ownership scope, across customers with commitments.
Escalation	To SCM Worker, CM Leader, then service governance.	To CM Leader.	To Service Owner / Process Owner as applicable.	Final service-governance escalation target within this role set.

3. Role Specification - Service Customer

Role identity

SERVICE_CUSTOMER is an organizational governance role representing a department, division, company entity, or external service-consuming organization. The role is scoped to its OrgNode and children.

3.1 Purpose and accountability

- Express formal demand for new, modified, expanded, or retired services.
- Govern the organizational unit's IT consumption, budget implications, and authorized service access.
- Accept or decline formal quotes and thereby make a governed customer-side commitment decision.
- Monitor demand progress and hold the service organization accountable to SLA commitments.
- Govern which services users in the represented organization may access.

3.2 Workspace and navigation access

Workspace/screen	Access	Visible content	Permitted actions
WS-01-001 Dashboard	Yes - landing screen	Own demand counts by status; quoted demands awaiting action; SLA warnings/breaches; recent relevant events; Continuity Summary Banner when active.	New Demand; Review Quote; navigate to demand and SLA detail.
WS-01-002 Submit Demand	Yes	Entitled services and offerings for context.	Submit demand; cancel.
WS-01-003 Demand List	Yes	All demands where serviceCustomerId = caller.	Filter/search; view; create new demand.
WS-01-004 Demand Detail	Yes - own record only	Full own demand, status timeline, assessment/quote data when applicable, commitment terms, linked change status only, activity log.	Accept Quote when QUOTED; decline/close with reason when QUOTED.
WS-01-005 Service Catalog	Yes - read-only	ACTIVE services, offerings, SLA profiles within entitlement scope.	View service; prepopulate a new demand.
WS-01-006 SLA Performance	Yes - read-only	SLA events/profiles for entitled services; anonymized linked incident metrics; trends.	Export PDF/CSV report; contact SCM Worker if messaging enabled.
WS-02 CSM Workspace	No	None.	None.
Service Desk operational workspace	No	None.	None.

3.3 Data scope and field visibility

Entity/data	Visibility rule	Write authority
Demand	Own demands only; caller must be serviceCustomerId; strict OrgNode scope.	Create; accept quote; decline/close only at permitted states.
Service / ServiceOffering	Only entitled and ACTIVE catalog items for OrgNode.	None.
SLAProfile / SlaEvent	Only profiles/events tied to entitled active services.	None.
Entitlement	OrgNode entitlement records, read-only.	None.
Change	Status reference only when linked demand is IN_CHANGE; no change detail.	None.

Entity/data	Visibility rule	Write authority
Incident	No incident records; SLA view may show anonymized aggregate counts and timings.	None.
Other Service Customers	Never visible.	None.

3.4 Allowed powers and decisions

- Submit a formal demand with required title and description, optional related services, desired timeline, and business justification.
- Accept a quote only when the demand is in QUOTED state and the caller owns the demand.
- Decline a quote with a documented reason; the decline must not silently erase the governance record.
- Track status through NEW, UNDER_REVIEW, QUOTED, ACCEPTED, IN_CHANGE, FULFILLED, and CLOSED, including redirected/rejected outcomes.
- View service commitments, SLA class, current compliance, warnings, breaches, and historical trends.
- Authorize which services users in the represented organizational scope may consume.
- Escalate unmet commitments through the named SCM Worker and then the CM Leader.

3.5 Hard prohibitions

Prohibited action	Why prohibited
Access Service Desk operations	Service Desk serves Service Users and operational incidents/requests, not organizational service governance.
Report incidents as Service Customer	Incidents are reported by Service Users through Service Desk.
Contact Technical Owners directly	Technical contact flows through governed CE/PM paths and the SCM Worker.
Approve technical changes	Change approval belongs to Change Enablement.
Modify catalog	Catalog changes are executed only through Change Enablement.
View another customer's data	Tenant and OrgNode isolation are structural.
Submit on behalf of another OrgNode	Demand authority is limited to caller scope.
See internal Problem detail or full Change detail	Internal process data is outside the customer-facing CSM surface.

3.6 Event and notification entitlements

Notification/event	Meaning	Expected role response
DemandQuoted	Quote is ready.	Review details; accept or decline.
DemandFulfilled	Committed work completed.	Review outcome and proceed to closure/confirmation as applicable.
DemandRejected	Demand not feasible or out of scope.	Review documented reason; escalate if disputed.
SlaWarning	SLA reached warning threshold.	Expect proactive context from SCM Worker; monitor.
SlaBreached	Commitment breached.	Review impact/remediation; invoke escalation path if required.
ServiceCatalogUpdated	New or changed service available in scope.	Review portfolio and entitlements.

4. Role Specification - SCM Worker

Role identity

SCM_WORKER is the primary executor of all CSM processes and the named governance contact for one or more Service Customers. It owns the complete customer communication thread from demand submission through fulfillment and closure.

4.1 Core responsibilities

- Receive and formalize service demand as a governed Demand Record.
- Perform catalog check before any quote, then assess feasibility and portfolio alignment.
- Determine operational outcome: redirect, recommend rejection, quote, or document deferral.
- Prepare accurate quotes for CM Leader approval and issue them only after approval.
- Record customer acceptance, create the Change Request/ProcessHandover, and retain communication ownership during execution.
- Confirm fulfillment, ensure catalog reality matches delivery, and close the demand record.
- Monitor SLA performance, prepare reports, and provide contextual customer communication.
- Identify catalog inaccuracies and trigger governed catalog change through Change Enablement.

4.2 Workspace and screen access

Screen	Access/data	Worker actions	Status/authority limits
WS-02-001 Dashboard	Assigned queue; unassigned demands as secondary view; quoted demands awaiting customer; SLA overview; IN_CHANGE feed.	Open work; assign to self where allowed; monitor urgency and communication health.	No leader-only reassignment or gate bypass.
WS-02-002 Demand Queue	All entitled tenant demands, filterable by status, worker, customer, date, unassigned.	View/edit; create demand on behalf of legitimate customer; assign to self where allowed.	Cross-customer visibility must follow tenant/role scope.
WS-02-003 Demand Work Surface	Full Demand; catalog lookup; linked Change; customer contact; activity history; Cogni overlay where enabled.	Assign to self; start review; redirect; draft rejection; submit quote; create CR; mark fulfilled/closed subject to state gates.	Quote/rejection gates require CM Leader; API enforces status and entitlement.
WS-02-004 Full Catalog	Full catalog, offerings, SLA profiles, dependencies relevant to assessment.	Search, inspect, identify coverage/gaps, initiate governed catalog change need.	No direct catalog write.
WS-02-005 SLM Dashboard	All SLA events in authorized CSM scope; customer/service compliance.	Monitor, analyze, prepare report, initiate communication/escalation.	Report issuance subject to CM Leader review.

4.3 Demand state transition authority

Current state	Worker may do	Required evidence/gate	Result
NEW	Assign to self or receive assignment; start review.	Legitimate Service Customer; Demand Record exists.	UNDER_REVIEW
UNDER_REVIEW	Catalog check; assess; redirect; prepare rejection; prepare and submit quote for approval; document deferral.	Catalog check first; reason mandatory for rejection; estimate/notes required for quote; leader gate.	REDIRECTED / REJECTED / QUOTED / remain UNDER_REVIEW
QUOTED	Monitor customer action; answer questions; keep communication current.	Cannot accept on behalf of customer unless formally recording actual customer decision under governed process.	ACCEPTED or closure path after customer decision
ACCEPTED	Create Change Request and CM_TO_CE handover.	Accepted quote; approved commitment; required scope and references.	IN_CHANGE

Current state	Worker may do	Required evidence/gate	Result
IN_CHANGE	Monitor linked change; communicate milestones, delays, and risk.	No technical execution or CE approval.	FULFILLED after ChangeClosed and outcome verification
FULFILLED	Confirm delivered outcome, catalog alignment, and customer communication; close.	Completion evidence and customer-facing confirmation.	CLOSED
REJECTED / REDIRECTED	Communicate reason/guidance and close governed record.	Documented reason or offering reference.	CLOSED

4.4 Explicit authorities

- Create Demand Records on behalf of legitimate Service Customers.
- Conduct assessment and determine outcome type, subject to leader approval for quotes and rejections.
- Prepare quotes, scope, effort, timeline, SLA and cost/resource implications.
- Record formal customer acceptance.
- Create Change Requests and ProcessHandover records to Change Enablement.
- Maintain all customer communications throughout execution.
- Identify catalog change needs and initiate the governed workflow with required approval.
- Monitor SLA data, issue contextual communications, and produce performance reports subject to review.

4.5 Explicit limits

Cannot	Boundary
Issue an unapproved quote	Every quote is an organizational commitment requiring CM Leader approval.
Unilaterally reject without required authorization	Rejection reason is mandatory and leader governance applies.
Write to service catalog	Only Change Enablement executes catalog updates.
Approve the resulting technical change	CE Leader authority; separation of duties.
Act as CE Leader in same scope	Prohibited concentration of assessment and approval.
Serve Service Users through CSM	Service Users belong to Service Desk; redirect them.
Bypass CE to contact Technical Owners about delivery	Progress communication is through CE Worker/governed handover.
Bind Service Owner or CM Leader	Commitment-level decisions require authorized approval.

4.6 Notifications and mandatory responses

Signal	Required response
DemandCreated	Acknowledge, ensure assignment, create current communication record, start assessment promptly.
DemandAccepted	Create governed Change Request and handover; inform customer of execution entry.
SlaWarning	Investigate context and proactively communicate before breach.
SlaBreached	Provide governed communication with impact and remediation context; escalate to CM Leader.
ChangeClosed	Verify outcome and catalog alignment; move demand toward FULFILLED/CLOSED.
Stalled state / Cogni flag	Update record, remove blocker or escalate before customer asks for status.

5. Role Specification - CM Leader

Role identity

CM_LEADER is the operational governance authority for the CSM function. The role converts Owner intent into organized execution, manages throughput and quality, and stands between SCM Workers and Service Owner escalation.

5.1 What the CM Leader owns

- Demand throughput: every active demand has a current status and recent communication record.
- Assessment quality: catalog checks are not bypassed and outcomes are evidence-based.
- Quote accuracy: every quote is reviewed before reaching a Service Customer.
- Customer communication standards: customers receive proactive updates rather than chasing status.
- SLM reporting discipline: reports are accurate, complete, timely, and reviewed before issuance.
- Workload distribution and visibility across SCM Workers.
- Separation of duties within CSM and between CSM and Change Enablement.
- Escalation routing to Service Owner and Process Owner as appropriate.

5.2 Access and oversight scope

Surface	Leader visibility	Leader powers
WS-02-001 Dashboard	All tenant/function demand pipeline; prominent unassigned queue; worker workload; awaiting customer action; SLA and change feeds.	Assign/reassign; identify stalls; direct corrective action; escalate.
WS-02-002 Demand Queue	All demands in authorized tenant scope with worker/customer filters.	Assign unassigned demands; manage distribution; inspect any active demand.
WS-02-003 Demand Work Surface	Full demand and event history for governance review.	Approve/return quote; authorize rejection; verify process compliance; intervene through governance, not by silently replacing worker.
WS-02-004 Full Catalog	Full catalog view for governance and misalignment detection.	Trigger modification workflow; no direct write.
WS-02-005 SLM Dashboard	Aggregated SLA compliance by service/customer and all events in scope.	Review reports; authorize exception process; escalate breach; trigger catalog review.
Cogni operational intelligence	Pipeline health, workload, SLA aggregation, breach communication drafts, forecasts at mature stage.	Use insight for decisions; Cogni cannot approve or issue communications autonomously.

5.3 Mandatory governance gates

Gate	Leader decision	Minimum review criteria	Possible outcomes
Quote approval	Approve or return to SCM Worker.	Scope alignment; feasibility; timeline/effort; SLA class; cost/resources; dependencies; separation of duties.	Approved for customer issuance / returned with corrections.
Rejection authorization	Confirm or reject worker recommendation.	Legitimate actor; feasibility/out-of-scope basis; complete customer-facing reason; consistency.	Authorized rejection / reassessment / escalation.
SLA report review	Approve before customer issuance.	Accuracy; completeness; period; commitment baseline; breach context; remediation; communication quality.	Approved / corrected / escalated.
Exception process	Authorize contractual deviation path.	Contract basis; impact; owner implications; auditability.	Authorized exception / escalate to Service Owner.

5.4 Authorities

- Approve quotes before issuance.
- Authorize rejection decisions and handle contested rejection at the next governance level.
- Assign and rebalance demands across SCM Workers.
- Review and approve SLA reports before issuance.
- Escalate significant SLA breaches and commitment disputes to Service Owner.
- Monitor the entire demand pipeline in real time.
- Trigger Service Catalog Management modification workflow when SLA-class misalignment is identified.
- Authorize exception processes when contractual SLA terms require deviation.
- Report CSM KPIs and structural process issues to the Process Owner.

5.5 Limits

Not authorized	Why
Issue quotes directly	SCM Worker owns customer communication and issuance after approval.
Modify catalog directly	CE executes catalog writes.
Act as CE Leader for same service scope	Separation of duties.
Approve changes	CE Leader authority.
Override Service Owner decision	Owner layer is the higher service-governance authority.
Make commitments binding Service Owner without approval	Service-level commitment authority remains with Service Owner where required.
Replace workers as normal operating model	Leader oversees quality and capacity; substitution hides capability and accountability problems.

6. Role Specification - Service Owner

Role identity

SERVICE_OWNER is an Owner-layer accountability role for one or more catalog services. The role owns service value, quality, SLA commitments, and lifecycle governance - not CSM queue execution.

6.1 Scope of accountability

- Service value and fitness for purpose.
- SLA commitment quality and alignment with actual operational capability.
- Approval of new or materially changed service commitments.
- Governance response to SLA breach and structural service risk.
- Service lifecycle direction, including significant evolution and retirement.
- Catalog accuracy for owned services.
- Governance coordination with Technical Owner, CM Leader, CE, and PM at defined touchpoints.

6.2 Ownership-scoped portal view

View	Scope	Permitted governance response
Service portfolio status	All services in ownership; current operational state; active incident/SLA warnings.	Prioritize governance attention and request accountable response.
SLA performance overview	Real-time and historical metrics across customers committed to owned services.	Authorize resources/vendor support/emergency path; require remediation.
Active Problem records	Open investigations affecting owned services and decision outcomes.	Participate at escalation/decision gate, not as PM executor.
Pending governance approvals	Demand commitments, catalog proposals, complex change items affecting owned services.	Approve, reject, request clarification, or escalate according to ownership authority.
Known Error register	Known limitations and workarounds for owned services.	Assess service-level risk and lifecycle implications.

6.3 Demand Management touchpoints

Touchpoint	Owner authority	Owner does not do
New or significant commitment	Approve service scope/SLA commitment when a customer-accepted quote creates a new service, changes SLA class, expands obligation, or extends service to new scope.	Prepare quote, assess routine demand, or manage demand queue.
Escalated dispute	Decide when rejection or commitment dispute exceeds CM Leader authority.	Replace the worker/leader operational process.
Outcome failure	Decide structural response when delivered outcome cannot meet commitment.	Execute technical remediation.

6.4 SLA and breach powers

- Approve the quality and appropriateness of SLA commitments for owned services.
- Receive immediate governance escalation for significant breach.
- Authorize additional resources, vendor engagement, emergency change direction, or formally documented remediation commitment.
- Identify and correct persistent SLA-class misalignment through governed catalog/lifecycle change.
- Ensure a visible warning or breach produces a governance response rather than passive observation.

6.5 Hard limits

Not the Service Owner's role	Correct authority
Demand assessment or quote preparation	SCM Worker.
Routine customer contact	SCM Worker; CM Leader for escalated governance.
Change execution or technical change approval	CE Worker / CE Leader.
Technical ownership of CIs	Technical Owner.
Incident queue operation	Service Desk roles.
Process design ownership	Process Owner.
Direct catalog editing	Change Enablement executes the governed change.

7. Detailed Screen-Level Permission Matrix

Screen / element	Service Customer	SCM Worker	CM Leader	Service Owner
WS-01 Dashboard	Full own-scope use.	No default need; customer context may be seen through WS-02.	No default use.	No dedicated access specified.
WS-01 Submit Demand	Create own demand.	May create on behalf through WS-02, not impersonate customer UI.	Oversight only.	No.
WS-01 Demand List/Detail	Own demands; accept/decline quote at state gate.	Full operational record in WS-02.	Full oversight in WS-02.	Only ownership-relevant approval/escalation context.
WS-01 Customer Catalog	Entitled read-only.	Full catalog through WS-02.	Full catalog through WS-02.	Ownership-scoped service portfolio.
WS-01 SLA Performance	Own entitled services, read-only/export.	Assigned-customer SLA operation/reporting.	Aggregated CSM SLA governance.	Owned-service SLA governance across customers.
WS-02 Dashboard	No.	Assigned queue and operational panels.	All-function oversight, assignment, workload.	No routine queue access specified.
WS-02 Demand Queue	No.	Operate entitled demands.	All-scope oversight and assignment.	No routine access specified.
WS-02 Demand Work Surface	No.	Primary executor.	Review/gates/escalation.	Approval/escalation only when service commitment is implicated.
WS-02 Full Catalog	No.	Assessment and change-trigger context; no write.	Governance and misalignment detection; no write.	Owned-service accuracy/lifecycle authority; no direct write.
WS-02 SLM Dashboard	No.	Monitor assigned customers and prepare reports.	Monitor all scope and approve reports.	Owned services across customers.
Continuity Summary Banner	Own-scope dashboard when active.	CSM dashboard when active.	CSM dashboard when active.	Only if ownership portal implements it; not explicitly assigned in DAL-24.
Cogni Overlay	Customer AI assistant only; no autonomous decision.	Operational suggestions/actions remain API governed.	Function-level intelligence; no autonomous approval.	Predictive accountability insights as platform matures; no autonomous governance decision.

8. API and Action Enforcement Matrix

API/action	Service Customer	SCM Worker	CM Leader	Service Owner / note
GET /ops/demands	Own scope only.	Authorized tenant/assignment scope.	All authorized CSM scope.	Only ownership-relevant context if exposed.
POST /ops/demands	Submit own.	Create on behalf of legitimate customer.	Not primary use.	No.
PATCH /ops/demands	No general edit.	Operational fields and assignment as entitled.	Assignment/reassignment and governance corrections as entitled.	No routine edit.
POST /ops/demands/id/review	No.	Yes at NEW.	Oversight; should not bypass worker model.	No.
.../redirect	No.	Yes at UNDER_REVIEW with offering reference.	Oversight/authorization as policy requires.	No.
.../reject	No.	Prepare/request with mandatory reason.	Authorize.	Escalation decision only.
.../quote	No.	Prepare/submit for approval.	Approve gate; source states leader does not issue directly.	Approve service commitment where materially required.
.../accept	Own demand only at QUOTED.	Record actual formal customer acceptance under governed process.	Monitor.	No.

API/action	Service Customer	SCM Worker	CM Leader	Service Owner / note
.../close	Own quote decline/closure path as specified; own record only.	Fulfillment/closure execution at correct state.	Oversight.	No routine action.
POST /ops/changes	No.	Create CR from accepted demand or catalog governance need.	Oversee and ensure separation.	Authorize direction/commitment, not technical CR execution.
GET /catalog/services	Entitled only.	Full assessment view.	Full governance view.	Owned services.
PATCH /catalog/services/:id	No.	No.	No.	No direct write; CE performs update on change close.
GET /ops/sla-events	Own scope.	Assigned/authorized CSM scope.	All authorized CSM scope.	Owned-service scope.
GET /ops/handovers	No.	CM_TO_CE records.	Oversight.	Only escalation context if exposed.

9. Workflow Decision Rights

Workflow decision	Initiates	Prepares/executes	Approves/authorizes	Receives/owns outcome
Create service demand	Service Customer or SCM Worker on behalf	SCM Worker formalizes and assesses	No approval to record legitimate demand	Service Customer + SCM Worker
Redirect to existing offering	SCM Worker	SCM Worker documents offering and communicates	CM Leader oversight where contested/policy requires	Service Customer
Reject demand	SCM Worker recommends	SCM Worker documents reason	CM Leader; Service Owner if escalated commitment dispute	Service Customer
Issue quote	SCM Worker	SCM Worker prepares and communicates	CM Leader mandatory; Service Owner when new/material service commitment is affected	Service Customer decides
Accept quote	Service Customer	SCM Worker records and coordinates	Customer authority; service commitment owner gate where applicable	CSM and CE
Create/execute change	SCM Worker creates CR/handover	CE executes	CE Leader approves technical change; Service Owner only service commitment dimension	Service Customer receives outcome through SCM Worker
Update catalog	CSM identifies need	CE executes governed update	Applicable CE/owner governance	All entitled consumers
Issue SLA report	SCM Worker prepares	SCM Worker communicates	CM Leader reviews before issuance	Service Customer
Respond to major SLA breach	SCM Worker communicates; CM Leader escalates	Operational teams remediate	Service Owner makes structural governance decision	Service Customer and service governance
Close demand	SCM Worker after fulfillment; customer may close/decline in specified own-scope paths	SCM Worker completes record	Status/API gates	Governance record retained

10. Notification and Escalation Matrix

Trigger	Service Customer	SCM Worker	CM Leader	Service Owner
New demand	Confirmation / status visibility.	Receive, assign/acknowledge, assess.	See unassigned/throughput risk; assign.	None unless strategic.
Quote ready	Review and decide.	Issue after approval and answer questions.	Must have approved before issuance.	Approve commitment if materially affects owned service.
Customer accepts	Commitment recorded.	Create CR/handover; communicate next step.	Monitor transition and separation.	Visibility/approval where commitment governance requires.
Change delayed	Receive proactive contextual update.	Own communication and escalate.	Intervene/escalate systemic issue.	Receive if service commitment at risk.
SLA warning	View warning; expect context.	Investigate and proactively communicate.	Monitor all warnings and worker response.	Governance attention for owned service.
SLA breach	Review impact and remediation; escalate as needed.	Immediate contextual communication; escalate.	Validate response and escalate significant breach.	Authorize structural response/remediation commitment.
Change closed	Receive fulfillment communication.	Verify outcome/catalog and close demand.	Monitor closure discipline.	Confirm structural service outcome when relevant.
Contested rejection	Raise through SCM Worker/CM Leader.	Document dispute.	Decide or escalate.	Final service-governance decision when commitment implications exist.

11. Data Security, Scope and Rendering Rules

11.1 Mandatory access checks

6. Authenticate the caller and resolve active role, tenant, OrgNode, ownership, assignment, and entitlements.
7. Check workspace entitlement before navigation is rendered.
8. Check record scope before any row, panel, aggregate, export, or notification is returned.
9. Check current state before rendering action buttons.
10. Check separation-of-duties constraints before approval or handover.
11. Execute action through domain API; never implement state change in the frontend or Cogni overlay.
12. Record actor, timestamp, prior state, new state, reason, approval, and correlation context in the activity/audit trail.
13. Publish the resulting event so counters, timelines, dashboards, and notifications update in real time.

11.2 Deny-by-default examples

Condition	Required behavior
Service Customer opens another customer demand URL	Return denied/not found; render no record metadata.
Accept Quote when status is not QUOTED	Hide button and reject API call.
SCM Worker attempts direct catalog PATCH	Deny regardless of UI access.
SCM Worker submits quote without leader approval	Keep quote non-issuable; record pending/returned approval state.
CM Leader attempts CE change approval	Deny due to role boundary.
CM Leader also assigned CE Leader in same service scope	Block conflicting assignment or action via SoD control.
Service Owner attempts incident queue operation	Deny; ownership portal is accountability view, not SD execution.
Cogni proposes an action outside entitlement	Do not render executable action; explanation may be shown without bypass.

12. Audit Evidence Required for Every Governed Action

Action category	Minimum audit evidence
Demand creation	Actor, represented Service Customer/OrgNode, source channel, title/description validation, timestamp, event ID.
Assignment	Previous worker, new worker, assigning leader/actor, reason, timestamp.
Assessment	Catalog search/check evidence, feasibility notes, related services/offers, decision rationale.
Redirect	Offering reference, customer-facing explanation, actor, timestamp.
Rejection	Mandatory reason, worker recommendation, leader authorization, customer communication record, dispute/escalation if any.
Quote	Scope, effort, timeline, SLA class, cost/resources, dependencies, worker author, leader approval/return comments, issue timestamp.
Acceptance/decline	Customer actor or formally recorded customer decision, decision time, reason for decline, version of quote accepted.
Handover to CE	Origin demand, accepted commitment, CR ID, handover type CM_TO_CE, sender, receiver/acknowledgement, timestamp.
SLA report/communication	Period, source metrics, warning/breach context, worker author, leader reviewer, issuance record.
Service Owner decision	Owned service, decision basis, affected commitments/customers, resources/remediation authorized, follow-up owner/date.
Closure	Fulfillment evidence, catalog alignment verification, customer communication, closing actor, final state.

13. Implementation Acceptance Checklist

Area	Acceptance criteria
Role routing	Each role lands only in its authorized portal/workspace; unauthorized workspace routes are blocked server-side.
Navigation	Menus and screen links are entitlement-governed and do not expose inaccessible modules.
Record security	OrgNode, assignment, tenant, and service ownership filters are enforced in APIs and data layer, not only UI.
State machine	Every action is available only in the correct state and produces the defined transition/event.
Approval gates	Quote, rejection, and SLA report gates cannot be bypassed by direct API request or client manipulation.
Separation of duties	CM/CE scope conflicts and catalog-write boundaries are enforceable.
Customer isolation	No cross-customer data leaks in lists, search, exports, counters, notifications, or deep links.
Catalog integrity	CSM can identify/trigger changes but cannot directly modify catalog records.
Communication ownership	SCM Worker remains named contact and communication owner through change execution.
Owner posture	Service Owner receives governance approvals and risk signals without being converted into an operational queue worker.
Cogni safety	Every executable suggestion maps to a domain API and respects entitlements; no autonomous approval.
Auditability	Every governed decision has actor, reason, state, approval, timestamp, and linked evidence.
Real-time updates	Dashboards, lists, timelines, and alerts refresh from domain events.
Exports	Customer exports contain only own entitled data and no internal incident detail beyond permitted aggregates.

14. Source Traceability

Source document	Primary use in this master
DAL-24_uSMS_Experience_Spec_v1_2	Workspace scope; screen inventory; visible entities; actions; constraints; notifications; cross-workspace principles; API consumption.
Role_Guide_Service_Customer_v1_0	Customer authority, service portfolio, SLA accountability, portal view, prohibitions, escalation paths.
Role_Guide_SCM_Worker_v1_0	Worker lifecycle obligations, authorities/limits, communication ownership, catalog/SLM duties, leader relationship.
Role_Guide_CM_Leader_v1_0	Leader accountabilities, mandatory gates, assignment, SLA governance, authorities/limits, escalation.
Role_Guide_Service_Owner_v1_0	Owner-layer accountability, service/SLA/lifecycle powers, CSM touchpoints, portal view, structural limits.

No invented permissions

When a source describes accountability without a concrete CSM screen or endpoint, this document preserves it as governance authority and explicitly avoids asserting an unprovided implementation surface.

15. Complete Role Operating Procedures

Purpose of this appendix

This appendix expands the permission matrices into source-grounded operating procedures. It describes what each role must do before, during, and after every governed decision without granting authority beyond the supplied role guides and DAL-24.

15.1 Service Customer - complete operating procedure

Operating area	What the role does	Required boundary / evidence
Organizational representation	Acts for a formally represented organizational unit, not as an unrestricted individual user. Governs the unit service relationship, consumption, budget implications, and user access.	All views and actions remain restricted to the represented OrgNode and children.
Demand initiation	Raises a demand for creation, modification, expansion, SLA change, access/capacity change, or retirement of a service.	Title and description are mandatory; demand cannot be raised for another OrgNode.
Demand clarification	Provides business purpose, desired outcome, timeline, justification, constraints, and answers SCM Worker questions during UNDER_REVIEW.	Does not perform feasibility assessment or catalog governance.
Quote decision	Reviews scope, effort, timeline, SLA class, cost/resource implications, dependencies, and constraints; accepts or declines.	Only own QUOTED demand; decline requires a recorded reason.
Commitment governance	Understands that acceptance commits the organization and service provider to the approved terms.	Cannot alter quote terms after acceptance through an informal channel.
Demand tracking	Uses the portal timeline and SCM Worker communication to follow NEW through CLOSED, including REDIRECTED and REJECTED outcomes.	Sees linked change status only, not internal change details.
Service portfolio	Browses entitled ACTIVE services, offerings, request types, and SLA profiles applicable to the OrgNode.	Catalog is read-only.
User governance	Defines which services users in the represented organization may access.	Does not administer technical access controls outside the governed entitlement process.
SLA accountability	Reviews SLA health, warnings, breaches, compliance trends, and reports; asks for remediation context.	Incident details remain hidden; only permitted aggregates are visible.
Escalation	Escalates first through the named SCM Worker, then CM Leader, and ultimately service governance when commitments remain unresolved.	Does not bypass CSM to direct engineers or technical owners for routine work.
Cogni use	May ask for explanations, summaries, demand status, SLA interpretation, and guided navigation.	Cogni cannot approve a quote, broaden data scope, or expose internal records.

15.2 SCM Worker - complete operating procedure

Lifecycle phase	Mandatory worker activity	Prohibited shortcut
Customer relationship establishment	Remain the named contact for assigned Service Customers and preserve the full institutional record of commitments, demand history, and SLA performance.	Do not reduce the role to anonymous ticket intake.
Demand receipt	Validate that the requester is a legitimate Service Customer actor and create the formal Demand Record in NEW state.	Do not treat email, chat, or meeting notes as the authoritative demand record.
Catalog check	Search active catalog services, offerings, request types, and entitlements before proposing new work.	Never quote a new service before determining whether an existing offering already covers the need.
Assessment	Move to UNDER_REVIEW; evaluate feasibility, portfolio alignment, historical context, service implications, and required consultations.	Do not promise feasibility, cost, timeline, or SLA before assessment.

Lifecycle phase	Mandatory worker activity	Prohibited shortcut
Redirect	When an existing offering covers the need, select the offering, document the reason, communicate guidance, and close through the governed redirect route.	Do not create duplicate catalog scope.
Reject recommendation	Document a complete customer-facing rejection reason when infeasible, out of scope, or invalid; submit for CM Leader authorization.	Cannot unilaterally finalize an unauthorized rejection.
Quote preparation	Prepare scope, effort, timeline, SLA class, cost/resource implications, dependencies, constraints, and notes.	Cannot issue the quote directly to the customer before CM Leader approval.
Quote issuance	After approval, issue the governed quote, record version and issue time, and explain it to the Service Customer.	Do not alter approved terms outside the approval flow.
Customer decision	Record acceptance or decline accurately and maintain the decision evidence.	Cannot accept on behalf of the customer without formal evidence.
CE handover	After acceptance, create the Change Request / CM_TO_CE handover with complete commitment context.	Cannot approve or execute the technical change.
Execution communication	Remain communication owner during IN_CHANGE; provide milestone, delay, risk, and completion context to the customer.	Do not redirect the customer to engineers for status.
Fulfillment verification	Confirm delivered outcome and catalog alignment, communicate completion, move to FULFILLED, and close with evidence.	Do not close solely because technical work is marked complete.
Catalog governance	Identify inaccuracies, initiate governed catalog change, track it through CE, and verify the resulting catalog reflects reality.	Never directly write or patch the catalog.
SLM governance	Monitor assigned customer SLA health, prepare reports, communicate warnings/breaches, and coordinate remediation context.	Never allow breach communication to be silent or context-free.
Escalation	Surface uncertainty, stalled work, disputed rejection, material SLA risk, or commitment conflict early to CM Leader.	Do not conceal early signals until the customer escalates.
Cogni use	Use recommendations, summaries, drafting assistance, and action guidance only within entitlement and state.	No autonomous transitions or approvals; every executable action calls a domain API.

15.3 CM Leader - complete operating procedure

Governance responsibility	Required leader behavior	Boundary
Demand throughput	Monitor all active demands, aging, unassigned work, stalled UNDER_REVIEW records, overdue customer action, and closure discipline.	Oversight does not mean taking over routine worker execution.
Assignment and workload	Assign or reassign demands, balance worker capacity, and ensure every Service Customer has accountable coverage.	Cannot use assignment to bypass role scope or separation controls.
Assessment quality	Verify the catalog check occurred and the assessment rationale is sufficient.	Does not become the primary assessor for every demand.
Quote gate	Review scope alignment, feasibility, timeline, SLA class, cost/resources, dependencies, and separation of duties; approve or return with corrections.	No quote reaches the Service Customer without this gate.
Rejection gate	Authorize a documented rejection; decide contested rejections or escalate commitment disputes.	Cannot approve a rejection with missing or vague customer-facing rationale.
SLM report gate	Review accuracy, period, source metrics, breach context, remediation narrative, and communication quality before issuance.	Does not allow unreviewed governance reports to leave CSM.
Communication discipline	Ensure SCM Workers proactively communicate status and maintain ownership through CE execution.	Does not normalize customers chasing status.

Governance responsibility	Required leader behavior	Boundary
SLA monitoring	View aggregate and customer-level compliance, warnings, breaches, trends, and response quality.	Does not directly manipulate source SLA events.
CE coordination	Ensure accepted demand handovers are complete and track execution without crossing into CE approval/execution.	Cannot approve technical changes.
Problem coordination	Use recurring or structural service failures to engage Problem Management and follow governance outcomes.	Does not perform PM worker analysis.
Service Owner escalation	Escalate service commitment, lifecycle, chronic breach, or structural resource decisions with complete evidence.	Does not send incomplete operational noise upward.
Separation of duties	Enforce that CSM assessment/quote authority remains separate from CE change approval for the same scope.	CM Leader cannot also act as CE Leader for the same service scope.
Cogni use	Use operational intelligence for queue risk, overdue work, SLA patterns, and decision preparation.	Cogni does not replace leader approval or accountability.

15.4 Service Owner - complete operating procedure

Ownership domain	Permitted governance action	Not permitted
Service value	Confirm that owned service descriptions, intended value, scope, and customer outcomes remain fit for purpose.	No routine demand queue processing.
SLA commitment quality	Approve or challenge SLA commitments for owned services and correct structural misalignment.	No preparation of operational quotes.
Significant commitment	Approve new service creation, SLA class change, major scope expansion, or extension to new customer/OrgNode when affecting an owned service.	Does not approve the CE technical execution plan.
Breach response	Authorize resources, vendor engagement, emergency-governance direction, remediation commitment, or documented acceptance where permitted.	Does not personally resolve incidents as an SD operator.
Lifecycle governance	Approve service evolution or retirement direction and require catalog reality to match the decision.	Cannot directly edit catalog records.
Catalog accuracy	Confirm correct service state and authorize governed correction when reviews reveal discrepancies.	Does not bypass CE/configuration execution.
Problem governance	Receive structural/root-cause escalation affecting service quality and decide service-level remediation direction.	Does not perform PM investigation tasks.
Technical Owner relationship	Coordinate service commitments with the Technical Owner who owns underlying CIs and technical integrity.	Does not absorb Technical Owner authority.
Customer relationship	Enter direct communication only for high-stakes governance, contractual breach, or dispute routed through CSM.	Not the routine named customer contact.
Portal use	View owned-service health, commitments, lifecycle risk, escalations, SLA performance, and pending governance decisions.	No general tenant-wide operational access unless separately entitled by another role.
Cogni use	Use ownership-level summaries and decision support for service risk and commitments.	No autonomous governance approval.

16. Exhaustive CSM Screen, Panel, Field and Action Inventory

16.1 WS-01 CSM Portal - Service Customer

Screen	Panel / field / data	Visibility and behavior	Action / restriction
WS-01-001 Dashboard	My Demand Pipeline	Counts and lanes for own demands; real-time event updates.	Click to list/detail; no cross-customer aggregate.
WS-01-001 Dashboard	Pending My Action	Own QUOTED demands with title, SCM Worker, quote date, effort/cost.	Review Quote only.
WS-01-001 Dashboard	SLA Health	Per entitled active service: name, SLA class, green/amber/red health.	Navigate to SLA detail; read-only.
WS-01-001 Dashboard	Recent Activity	Last relevant events such as DemandQuoted, DemandFulfilled, SlaWarning, ServiceCatalogUpdated.	No internal event details outside scope.
WS-01-001 Dashboard	Continuity Summary Banner	Shown only when tenant.continuityMode = ACTIVE; compact cross-domain delta summary.	Link to permitted cross-domain Continuity Dashboard.
WS-01-002 Submit Demand	Title	Required free text.	Submission blocked when empty.
WS-01-002 Submit Demand	Description	Required rich text describing need and reason.	Submission blocked when empty.
WS-01-002 Submit Demand	Related Services	Optional multi-select from entitled catalog.	Cannot select non-entitled services.
WS-01-002 Submit Demand	Desired Timeline	Optional informational field.	Does not create an automatic delivery commitment.
WS-01-002 Submit Demand	Business Justification	Optional supporting context.	Visible to authorized CSM assessment roles.
WS-01-003 Demand List	Columns	Title, status, submitted date, SCM Worker, last update.	Own demands only.
WS-01-003 Demand List	Filters	Status, date range, title search.	Filters cannot broaden scope.
WS-01-004 Demand Detail	Demand Summary	Title, description, submitted date, business justification.	Read-only after submission unless source workflow allows no edit action.
WS-01-004 Demand Detail	Status Timeline	Past/current/pending state visualization and activity history.	No direct state manipulation.
WS-01-004 Demand Detail	SCM Assessment	Effort, cost range, quote notes when QUOTED or later.	Not visible before allowed state.
WS-01-004 Demand Detail	Commitment Terms	Commitment notes when ACCEPTED or later.	Read-only.
WS-01-004 Demand Detail	Linked Change	Status only when applicable.	No technical change details.
WS-01-004 Demand Detail	Accept Quote	Visible only in QUOTED and caller owns record.	Confirmation required; API enforces transition.
WS-01-004 Demand Detail	Decline Quote	Visible only in QUOTED and caller owns record.	Reason required; governance record retained.
WS-01-005 Catalog	Service cards/detail	Description, customer value, commodity type, support levels, offerings, request types, SLA.	Read-only; ACTIVE + entitled only.
WS-01-005 Catalog	Submit Demand for Service	Prepopulates service context.	Creates demand, not a request or catalog write.
WS-01-006 SLA Performance	Summary table	SLA class, availability target, compliance, P1 response/resolution averages.	Read-only.
WS-01-006 SLA Performance	Event timeline/trend	Warnings, breaches, closed-in-time events and month trends.	Filter/export within scope.
WS-01-006 SLA Performance	Incident linkage	Anonymized counts and resolution timing only.	No incident record access.

16.2 WS-02 CSM Workspace - SCM Worker and CM Leader

Screen	Element	SCM Worker	CM Leader
WS-02-001 Dashboard	My Queue	Assigned demands sorted by urgency; primary operational panel.	May view for oversight but does not substitute as worker.

Screen	Element	SCM Worker	CM Leader
WS-02-001 Dashboard	Unassigned Demands	Can see and, when entitled, assign to self.	Prominent view; assign to any authorized SCM Worker.
WS-02-001 Dashboard	Awaiting Customer Action	View QUOTED demands and days since issue.	Monitor overdue customer decisions and follow-up discipline.
WS-02-001 Dashboard	SLA Health Overview	Assigned customer scope.	All function/tenant oversight scope.
WS-02-001 Dashboard	Change Status Feed	Linked IN_CHANGE demands and CE status.	Oversight of handover and delay risk.
WS-02-001 Dashboard	Continuity Banner	Visible when active and entitled.	Visible when active and entitled.
WS-02-002 Demand Queue	Rows and filters	Tenant/assigned scope as resolved; view/edit authorized records.	All authorized CSM scope; assign/reassign.
WS-02-002 Demand Queue	New Demand on behalf	Create for legitimate Service Customer.	Oversight; not normal creator.
WS-02-003 Work Surface	Demand Header / timeline / activity	Full authorized record and execution history.	Full oversight record and approval evidence.
WS-02-003 Work Surface	Catalog Check Panel	Search catalog, mark covered/redirect, proceed to quote.	Review that check occurred; may inspect evidence.
WS-02-003 Work Surface	Assessment fields	Edit during UNDER_REVIEW: effort, cost, quote notes and required context.	Review/return during governance gate.
WS-02-003 Work Surface	NEW actions	Assign to self; start review when entitled.	Assign/reassign; supervise transition discipline.
WS-02-003 Work Surface	UNDER_REVIEW actions	Redirect; recommend rejection; prepare/submit quote for approval.	Authorize rejection; approve/return quote.
WS-02-003 Work Surface	ACCEPTED action	Create Change Request and handover to CE.	Monitor completeness and SoD; no technical approval.
WS-02-003 Work Surface	IN_CHANGE	Track linked change; communicate milestones.	Monitor delay/escalation.
WS-02-003 Work Surface	FULFILLED/CLOSED	Verify outcome, communicate, close with evidence.	Monitor closure quality and aging.
WS-02-003 Work Surface	Cogni Overlay	Assist with next actions but every button maps to API and entitlement.	Decision support; cannot auto-approve.
WS-02-004 Full Catalog	Full service/offering/profile view	Read for assessment; initiate governed catalog-change need.	Read and monitor catalog governance; no direct write.
WS-02-005 SLM Dashboard	Customer SLA portfolio	Monitor assigned customers, prepare reports and communications.	Tenant/function oversight, report review, breach escalation.

17. Cross-Workspace Experience and AI Governance

Cross-workspace capability	Required CSM behavior	Security / authority rule
Global navigation	Show only CSM Portal or CSM Workspace entries and cross-domain links resolved for the active role and entitlement.	Hidden navigation is not sufficient; direct routes must also be denied.
Notification center	Display role- and scope-relevant events, deep-linking only to accessible records/screens.	Notification payloads must not leak restricted titles, customer names, service data, or internal record details.
Search	Search returns only records, services, offerings, and content the caller could access directly.	No scope broadening through search index, autocomplete, snippets, counts, or exports.
Continuity Summary Banner	Render on domain dashboards only when continuity mode is active; summarize deltas and link to permitted Continuity Dashboard.	Does not replace operational dashboard or grant cross-domain authority.
Cogni assistant	Explain, summarize, guide, draft, identify relevant next steps, and surface governed actions.	Must respect tenant, role, OrgNode, assignment, ownership, record state, and entitlements.
Cogni Execution Overlay	On applicable CSM work surface, show context, recommendations, evidence, and executable actions.	Every action invokes domain API; no business logic in overlay; no bypass of approval or SoD.
Real-time updates	Lists, counters, health indicators, activity timelines, and notifications update from domain events.	Polling-based stale authority or client-side state transitions are non-compliant.
Export	Allow only source-defined exports such as customer SLA PDF/CSV within caller scope.	Export query must repeat all server-side scope checks and remove internal incident detail.

17.1 Cogni role-specific boundaries

Role	Cogni may assist with	Cogni must never do
Service Customer	Explain portal, summarize own demand, compare quote terms, interpret SLA, guide demand drafting and escalation.	Accept/decline without user confirmation; expose another customer; reveal internal incident/change detail.
SCM Worker	Summarize demand, suggest catalog matches, draft assessment/quote/communication, identify missing evidence and SLA risk.	Finalize rejection, issue unapproved quote, edit catalog, approve technical change, silently transition state.
CM Leader	Surface workload risk, aging, quality gaps, approval evidence, SLA patterns, and escalation candidates.	Approve quote/rejection/report autonomously or assume CE authority.
Service Owner	Summarize owned-service commitments, SLA trends, breach impact, lifecycle risk, and pending governance decisions.	Execute operational work, alter catalog, approve CE plan, or broaden ownership scope.

18. Complete Event, Notification and Response Catalogue

Event / signal	Service Customer	SCM Worker	CM Leader	Service Owner
DemandCreated	Confirmation for own demand.	New demand requires validation/assignment or awareness.	Unassigned queue and throughput signal.	No routine notification.
DemandUnderReview	Status visibility.	Assessment active; maintain communication.	Aging/quality oversight.	Only if consultation or commitment risk requires.
DemandRedirected	Outcome plus existing offering guidance.	Communicate reason and next path.	Monitor quality/dispute.	Only escalated dispute affecting service commitment.
DemandRejected	Outcome with reason and escalation path.	Communicate leader-authorized reason.	Authorization/dispute accountability.	Only escalated service commitment dispute.
QuoteApprovalRequested	Not visible until approved/issued.	Await leader decision; correct returned gaps.	Mandatory review action.	Only if significant owned-service commitment needs owner gate.
DemandQuoted	Quote ready for own decision.	Follow up and explain terms.	Monitor overdue action and issuance quality.	Awareness only where ownership decision applies.
DemandAccepted	Confirmation and next-stage visibility.	Create CE handover and retain communication.	Monitor handover completeness.	Approve significant service commitment where required.

Event / signal	Service Customer	SCM Worker	CM Leader	Service Owner
ChangeCreated / Handover	Demand enters execution status view.	Track CE acknowledgement and communicate.	Monitor delay/SoD.	View when affecting owned service.
ChangeMilestone / Delay	Contextual progress through SCM Worker.	Proactive communication required.	Escalate material delivery risk.	Only structural commitment risk.
ChangeClosed	Completion pending CSM fulfillment verification.	Verify outcome/catalog and move demand toward fulfillment.	Monitor closure quality.	View material service outcome.
DemandFulfilled	Completion confirmation.	Communicate and obtain/record fulfillment evidence.	Monitor closure aging.	Outcome visibility for owned service.
SlaWarning	Warning for entitled service.	Proactive contextual communication and remediation coordination.	Monitor response quality and escalation need.	Ownership warning for service risk.
SlaBreached	Breach notice and governed explanation.	Immediate communication ownership and coordination.	Review response, report, and escalation.	Immediate governance decision for owned service.
ServiceCatalogUpdated	New/changed entitled service visibility.	Verify customer applicability and communicate.	Monitor catalog governance quality.	Confirm owned-service accuracy/lifecycle decision.

19. Field-Level Data Access Matrix

Data category	Service Customer	SCM Worker	CM Leader	Service Owner
Customer identity / OrgNode	Own represented organization and children.	Assigned/authorized customer records.	Authorized CSM tenant/function scope.	Only customers consuming owned services when needed for accountability.
Demand title/description/justification	Own demands.	Authorized demands.	Authorized oversight.	Only escalated/significant owned-service context.
Assessment notes	Visible when source screen/state permits quote assessment fields.	Create/update during UNDER_REVIEW.	Review for quality and approval.	Only commitment-relevant extract, not routine worker notes.
Estimated effort/cost/timeline	Own quote when QUOTED+.	Prepare.	Approve/return.	Review when significant commitment affects owned service.
Quote notes/version/approval	Own issued quote and decision record.	Prepare and issue after approval.	Full approval evidence.	Ownership gate evidence where applicable.
Commitment notes	Own accepted commitment.	Maintain/communicate.	Oversight.	Full for owned services.
Catalog service/offering	Entitled ACTIVE subset.	Full catalog read for CSM work.	Full catalog oversight read.	Owned services and relevant portfolio context.
Catalog write fields	None.	None direct.	None direct.	Authorize direction/accuracy only; no direct write.
SLA profile/events	Entitled own services.	Assigned customers.	Function/tenant oversight.	Owned services.
Incident details	No; aggregates only in SLA view.	Only CSM-relevant SLA/context where entitled, not SD queue authority.	Aggregate/escalation context.	Governance context only.
Change record	Linked demand status only.	Linked status and handover context required for communication.	Oversight status and SoD evidence.	Service-impact governance context, not CE work surface execution.
Activity/audit log	Own demand history.	Authorized full demand event history.	Oversight and approval history.	Owner decision and escalated service history.
Notifications/search/export	Own scope only.	Assigned/authorized scope.	Authorized function scope.	Owned-service scope.

20. Decision Rights and RACI by CSM Outcome

Outcome / decision	Service Customer	SCM Worker	CM Leader	Service Owner
Legitimate demand initiation	A/R for own organizational need	R for record creation/validation	A for function quality	I
Catalog-covered redirect	I/receives guidance	R	A for disputed/quality oversight	I or escalation only
Demand rejection	I/contest	R recommends/documents	A authorizes	A only when escalated service commitment dispute
Quote preparation	C for requirements	R	A approval gate	C/A for significant owned-service commitment
Quote acceptance	A/R	R records/communicates	I/oversight	I or owner gate as applicable
CE handover	I	R	A for completeness/oversight	I/C
Technical change approval	I	I	I	C on service commitment only; CE Leader is A
Customer communication	C/recipient	A/R	A for standard/quality	C only in high-stakes governance
SLA report preparation	I	R	A review/issuance gate	C/I for owned service
SLA breach governance	C/recipient/escalator	R communication/coordination	A for CSM response/escalation	A for owned-service structural decision
Catalog correction trigger	C when customer impact	R identify/initiate/verify	A oversight	A service direction/accuracy
Catalog modification execution	I	I	I	I; CE/config role is R/A
Demand fulfillment/closure	C/confirmation	R	A closure quality	I for material owned-service outcome

RACI interpretation

R = performs the work; A = holds decision/accountability; C = consulted; I = informed. Where a non-CSM role owns execution (for example CE Leader), this table explicitly avoids assigning that authority to a CSM role.

21. Source-Grounded Negative Permissions

Role	Must not access or perform
Service Customer	Other customers; tenant-wide demand queue; internal problem records; internal incident records; change work surface; direct catalog write; quote creation; demand assessment; technical approval; direct engineer assignment.
SCM Worker	Unentitled tenant data; direct catalog modification; unilateral quote issuance; final rejection without required leader authorization; technical change approval; anonymous or undocumented demand processing; silent SLA breach handling.
CM Leader	Direct catalog modification; CE technical approval; routine substitution for workers; combining CM Leader and CE Leader authority for the same service scope; approval without evidence; customer data outside authorized tenant/function scope.
Service Owner	Routine demand queue operation; demand assessment; quote preparation; incident triage; change execution/approval; direct catalog modification; technical CI ownership unless separately assigned; routine customer contact; services outside ownership scope.

22. End-to-End Authorization Test Scenarios

Test	Expected result
Service Customer submits valid demand for own OrgNode	Demand created in NEW; DemandCreated emitted; own dashboard/list updates.
Service Customer submits for another OrgNode	Denied server-side; no record created; no metadata leakage.
Service Customer opens another customer demand deep link	Denied/not found; notification/search cannot expose it.
Service Customer accepts own QUOTED demand	Confirmation; API validates role, ownership, state; moves to ACCEPTED; event/audit recorded.
Service Customer accepts UNDER_REVIEW demand via direct API	Denied; no state change.
SCM Worker starts review of authorized NEW demand	Moves to UNDER_REVIEW; actor/state/event recorded.
SCM Worker redirects without selected offering	Denied; required offering evidence missing.
SCM Worker attempts rejection without reason	Denied; BR-CM rejection rationale requirement enforced.
SCM Worker issues quote before leader approval	Denied/non-issuable; remains pending/returned.
CM Leader approves complete quote	Approval evidence stored; quote can be issued to customer.
CM Leader returns incomplete quote	Worker receives explicit correction requirements; customer sees no unapproved quote.
CM Leader authorizes documented rejection	Rejection can be finalized and communicated with reason.
SCM Worker directly PATCHes catalog	Denied regardless of frontend button visibility.
Accepted demand creates CM_TO_CE handover	CR/handover linked; CE receives context; SCM retains customer communication.
CM Leader attempts CE technical approval	Denied due to role boundary.
Same user acts CM Leader and CE Leader in same service scope	Conflicting action blocked by SoD.
SLA warning occurs	Scoped customer/worker/leader/owner signals generated according to role; worker communication tracked.
Service Owner authorizes breach remediation for owned service	Governance decision recorded with basis, scope, follow-up, and affected commitments.
Service Owner attempts incident reassignment	Denied; owner portal is not SD work surface.
Search/autocomplete queried for restricted customer	No title, count, snippet, or result returned.
Customer exports SLA report	Only entitled services and permitted aggregates; no internal incident detail.
Cogni suggests unavailable transition	Executable control absent; API denial if attempted.
Real-time event updates dashboard	Counters, list, timeline, and notification update from event bus without client-side authority.

23. Final Completeness Declaration and Source Limits

Completeness statement

This consolidated edition now covers every CSM role explicitly supplied in the source set; role purpose; authority; prohibitions; workspace and screen access; panel and field visibility; data scope; demand-state action rights; quote, rejection, SLA and commitment gates; service catalog boundaries; Change Enablement handover boundaries; notifications; escalation; Cogni; Continuity; audit evidence; RACI; negative permissions; and authorization tests.

Important source limitation

The supplied sources do not define a dedicated DAL-24 workspace ID or concrete API catalogue for Service Owner actions, nor do they provide Keycloak role names, database policy definitions, or a full endpoint schema for every governance decision. This document therefore preserves Service Owner capabilities as ownership-scoped governance authority and does not invent missing technical interfaces.

Source	Coverage appended
DAL-24 uSMS Experience Specification v1.2	WS-01/WS-02 complete screen and panel behavior; entitlement rendering; event-driven updates; search, notification, Cogni, Continuity, and API enforcement principles.
Role Guide - Service Customer v1.0	Organizational identity, powers, prohibitions, service portfolio, SLA classes/accountability, portal behavior, Cogni, escalation and failure handling.
Role Guide - SCM Worker v1.0	Full demand operating procedure, catalog/SLM duties, communication ownership, authorities/limits, leader/CE/PM relationships, Cogni and performance expectations.
Role Guide - CM Leader v1.0	Throughput/quality ownership, workforce leadership, quote/rejection/report gates, SLA governance, CE/PM/Service Owner coordination, escalation and limits.
Role Guide - Service Owner v1.0	Service accountability, demand/SLM/catalog/CE/PM touchpoints, Technical Owner and CSM relationships, escalation chain, portal and ownership limits.
